

Matthew Ginzburg

 Hoboken, NJ |  (929) 340-6901 |  mginzbur1@stevens.edu |  LinkedIn |  GitHub |  Portfolio

Education

Stevens Institute of Technology | Hoboken, NJ

Anticipated Graduation: May 2028

Bachelor of Science in Quantitative Finance | GPA: 3.7 / 4.0

Awards: Edwin Augustus Stevens Scholarship (\$104k), Presidential Scholarship (\$20k)

Relevant Coursework: Financial Time Series, Algorithms (C++), Advanced Probability & Stochastic Processes for QF, Financial Econometrics, Advanced Time Series & Machine Learning, Market Microstructure Trading Strategies, Linear Algebra

Projects

Polymarket US Quantitative Trading System [Paper](#) ↗

Jun 2026 – Jul 2026

- Built a mean-reversion trading system, turning \$1,200 into \$1,891.58 (+57.6%) over 35 days
- Validated the mispricing's reversion via Monte Carlo null-hypothesis testing (63.0% vs. 15.1%, $p < 0.000001$); correctly flagged a second, higher-win-rate strategy as statistically unvalidated ($p = 0.070$)
- Automated a bot that detected a calculated pricing gap and improved its resting bid in increments capped below fair value

Vanguard ETF Challenge [Article](#) ↗

Sep 2025 – Dec 2025

- Achieved the #1 total return (+2.58%) of 50 competing teams and the only portfolio to beat the S&P 500, by simulating millions of efficient-frontier portfolio allocations optimized for volatility-penalized Sharpe ratio rather than raw return
- Designed and pitched 'RHO,' a custom low-correlation, sector-diversified ETF built to reduce S&P 500 dependency and volatility, placing 2nd in the NYSE invitational pitch competition at the New York Stock Exchange

10-Q Equity Research Agent [Repo](#) ↗

Summer 2025

- Parsed each company's real 10-Q filing and standardized XBRL financial data live from SEC EDGAR
- Built a 5-step pipeline via the Gemini API — quantitative snapshot, risk synthesis, consistency check, capital allocation — to produce an informed equity recommendation

Kaiser-Stats [Repo](#) ↗

Jul 2026 – Aug 2026

- Built a stats engine for a local soccer league that parses inconsistent historical spreadsheet formats, streamlines registration, and transforms live game-report emails (via the Gemini API) into a unified per-player dataset
- Designed data-integrity safeguards (player identity resolution, plus-minus sanity checks) and a transparent power-ranking formula, backed by a Next.js demo and Supabase

FIBA Annual Stock Pitch Competition [Presentation](#) ↗

Sep 2025 – Oct 2025

- Placed 3rd pitching a DCF valuation model to evaluate Disney (NYSE: DIS), covering competitive advantage, headwinds, and tailwinds to judges

Skills

Programming: Python (Pandas, NumPy, scikit-learn), SQL, C++, TypeScript/JavaScript, R, Git

Involvements: Finance Investment Banking & Advisory Society (FIBA), Scholars of Finance (SoF), Poker Club

Data/ML: statistical modeling, predictive analytics, reinforcement learning, natural language processing, time-series forecasting, optimization, stochastic processes, Monte Carlo methods, portfolio optimization, risk management
